

BRUEWER WOODWORK
MANUFACTURING COMPANY

CUSTOM MILLWORK

Bruwer built its reputation by turning the most creative two-dimensional designs into three-dimensional masterpieces of the woodworker's art. Hand-carved eagles, majestic columns, raised panel walls, sweeping stairways, Victorian cornices, a conference table to seat 24, polished handrails, special stains and finishes all are routine challenges for Bruwer's experienced craftsmen. Examples of Bruwer's art can be seen in retail stores, medical facilities, office buildings, government buildings, universities, churches, restaurants, financial institutions and private residences.

▲ University Hospital Diagnostic Center, Cincinnati
Mahogany Reception Desk, mahogany fluted columns & Verdi marble.

▲ McAlpin's Eastgate
Beauty salon reception counter, plastic laminate & marble.

MODULAR CASEWORK

Whether it's hundreds of dormroom wardrobes or thousands of hospital room cabinets, you'll find Bruewer quality and technical know-how combined to answer the needs, meet all the specifications, stay within the budget, and installed on time. Desks, nurses' stations, wall cabinets, wrap counters, bathroom vanities, product demonstration counters; whatever the design, Bruewer has built it before or something like it.

INDUSTRIAL PARTS

Many manufacturers have called upon Bruewer to make integrated customized parts from wood or plastic laminates. Some only need hundreds, while others have ordered thousands of units. These customers represent a broad base of American businesses from automotive to furniture to industrial. Send us your specs and we will be happy to give you a competitive estimate.

▲ **Berry Women's Health Pavilion, Dayton**
Custom plastic laminate head wall & wardrobe units with retractable doors. Corian wash sink and post formed edges.

▲ **Jackson County Medical Center ICU**

Bruewer Woodwork began as a one-man operation on August 11, 1963 when August Bruewer started building cabinets and furniture for the residential market in the basement of his home. Mr. Bruewer, a fully qualified Master Craftsman in Cabinetmaking when he arrived in America in 1958, had earned his certification after thirteen years of intense training as an apprentice in his native land of West Germany.

The combination of Mr. Bruewer's skill and the public's desire for quality resulted in continuous growth to the business. Bruewer Woodwork became a serious player in the custom millwork industry when it moved into a 10,000 sq. ft. facility in 1967. Further expansion followed rapidly in a move to its present location in 1985.

Today's 165,000 sq. ft. of production space includes the most advanced equipment for the fabrication of wood and plastic laminate cases, cabinets, moldings, furniture, wall trims, doors, industrial parts and custom millwork. Even more important than the equipment are the talented craftsmen who have been taught the old world skills and take pride in the work they do. This work ethic and dedication to quality have been ingrained in the second generation of Bruewer management, who are actively directing the present day operations of the Company. Mr. Bruewer's sons have hands on experience in every facet of operations from sales and engineering through manufacturing and installation, and continue to maintain Bruewer Woodwork's respected reputation.

The versatility of the Company is evident in projects completed for some of the nation's most recognized names in retailing, restaurants, health care, offices, schools, churches, banks, hotels and commercial real estate. We have worked with some of the nation's outstanding architectural and contracting firms from design through installation. Call on us anytime to visit our comprehensive manufacturing facility or we can show you one or more of the projects we've completed that are similar to your needs.
